

SUBSTITUTE SPECIFICATION

The applicants submit a substitute specification in accordance with 37 CFR 1.125.

The substitute specification is being submitted to more clearly describe the various aspects of the present invention. The changes in the specification are for organizational purposes, deleting redundant information, and more clearly identifying exemplary embodiments of the invention.

A marked up version of the original specification is included to indicate the deletions and additions to the specification. The Office should take note that the prosecution of this case has been transferred to a new firm. The previous firm was not able to provide an electronic version of the actual application as filed. Care has been taken in data entry of the application to avoid any inadvertent errors.

An unmarked up version of the substitute specification is also provided.

The substitute specification does not include any new matter and simply presents the invention in a more clear and concise manner.

SUMMARY OF TELEPHONIC INTERVIEW

The applicants appreciate the Office's participation in the telephonic interview on October 22, 2003. Apparently the summary of the telephonic interview was sent to the applicants' previous attorney because the formal response, including the revocation and appointment of a new power of attorney, had not yet been filed. Applicants express their apology for any inconvenience that this may have caused.

Applicants' also would appreciate if the Office would send a copy of the Summary to the current attorney of record.
